PROFILE

Aspiring full-stack developer with a strong foundation in computing, mathematics and system level-thinking . Currently training at Zone01 Kisumu, building backend and frontend systems using Go, APIs, and modern development workflows.

TECHNICAL SKILLS

- Go (Golang), JavaScript, Python
- Git, GitHub, Linux, Cloud & DevOps - AWS(CCP Certified), Azure functions
- Bitcoin interfacing with core daemon and backend API integration.

PROJECTS

Image and Object Recognition using Jetson Nano — • Worked on developing a real-time face recognition system using Python and OpenCV,

applying concepts from machine learning, signal processing, embedded systems, and computing laboratories.

- Integrated camera input and explored data preprocessing and inference pipelines, documenting project progress, challenges, and lessons learned.
- Submitted a report documenting hardware limitations (Jetson Nano with 32GB memory) and proposed improvements for future iterations.

EXPERIENCE

Apprentice Developer — Zone01 Kisumu (2026 – Present)

- Building backend and frontend applications and systems using Go.
- Working with databases, APIs, Git workflows, and backend architecture principles.
- Collaborating on peer-driven software projects and technical problem-solving.

Red P – Software Engineering Intern (Remote)(May- Aug 2025)

- Contributed to the development of a web-based scholarship application system, gaining experience in real-world software engineering workflows.
- communicationDeveloped serverless APIs using Azure Function Apps to support scalable backend services. • Implemented secure authentication using Microsoft Entra ID, strengthening understanding of modern identity and access management systems. • Worked collaboratively in a distributed team environment, demonstrating adaptability, responsibility, and technical curiosity.

EDUCATION

University of Nairobi - BSc. Microprocessor Technology and Instrumentation.
